

MORSØ 1710

Built-in Atmosphere

For the discriminating homeowner who wants a high quality cast iron fireplace insert that will deliver all the benefits of cast iron. The insert is unique in that most inserts are made of steel, where Morsø uses durable cast iron for the materials and the face. The fireplace features classic Morsø design, with a large door that is elegantly arched at the top. This arch shape is repeated in the two self-cleaning windows in the door, providing a clear view of the soothing flames. The 1710 insert uses natural convection to provide good heat circulation in the room.

The fireplace has a first class combustion efficiency and can heat an area of up to 1200 sq ft. The fireplace is easy to operate using the inlet dials on the door. An optional fan to increase air circulation and heat distribution is available.

The strength and stability of cast iron makes it an ideal material for the construction of wood stoves. The material is not only attractive, due to its charming surface texture, it also has a great ability to absorb heat and slowly release it, long after the fire has gone out. The Morsø Iron Foundry has 150 years' experience in the manufacture of cast iron products, and has been a purveyor to the Royal Danish Court since 1915.

Morsø is one of the world's leading manufacturers of cast iron wood stoves and exports to Europe, Japan, Australia, South Africa and the USA.
